## Assignement 2

1) Which field of the Customers table is the primary key?

Ans)- As it has to be unique value field, in order to act as a key, it will be S num field.

2) What is the 4th column of the Customers table?

Ans)- Comm(Coommission).

3) What is another word for row?

For column?

Ans)- In RDBMS they are also know as tuples(row) and attributes(column).

4)Why isn't it possible to see the first five rows of a table?

Ans) Since in a RDBMS table each row is a file which is stored in a sequentially in Hard Disk of the server, when the sequential search happens for the fetch, a row which is stored at an early location gets fetched first, so its not possible to know which are the top 5 rows in a table in RDBMS.
